

Jean Marie River Planned Outage Tuesday, October 12

NTPC will be installing equipment at the Jean Marie River power plant. Generation will be shut down from approximately **3:30 PM to 4:30 PM on Tuesday, October 12.**

All customers in Jean Marie River will be without power for approximately 60 minutes.

Over the next two weeks, **three more outages lasting about an hour will also be necessary. We will notify the Band Office in advance and provide additional posters.**

The upgrades will enable power plant monitoring from our system control centre which should help to improve reliability over the long term.

We thank you for your cooperation and apologize for any inconvenience.
